

Conference

CIRRUS is an extensive collection of beautiful high quality meeting and conference tables and low credenza units for use in prestigious contemporary architectural interiors. Light scale design is distinguished by superb quality veneering and a choice of elegant edge details. A slender stainless steel base houses an ingenious multi-directional roller glide for easy mobility.

CIRRUS is three ranges in one;

- Individual stand alone meeting tables of six different top shapes supported by fixed or flip top bases
- A modular and linking system of individual tables for flexible, multi-purpose meeting and conference rooms, on fixed or flip top bases
- Large fixed and sectional conference tables using large and small top sections to create different shaped bespoke configurations

CIRRUS provides a simple yet sophisticated solution for the provision of power, data and cable management, as well as audio systems. Cables are routed through under-top structural raceways and down cable-managed legs. At the table top, cables emerge through matching veneered dual or single access flaps.
